JAF Cupidus: design concept

The distinct feature of JAF Cupidus is its extremely high x-height. In our earlier rounded sans JAF Domus, we made the counter spaces as even as possible, to give the typeface a calm and spatially generous impression. In Cupidus, we extended this concept of “equalising the space” to vertical directions, which reduces the hierarchy between upper and lowercase letters. Although we originally aimed for a display face, we soon realised that despite its extreme design, Cupidus can work very well in text sizes. This led us to create Cupidus Text, which is adjusted for continuous reading: looser letter and word spacing, and a somewhat reduced x-height. This makes for a surprisingly inconspicuous text face that can be set at tight line spacing.

JAF Cupidus: Text styles

Cupidus Text has a somewhat reduced x-height (see **1** below) and more generous letter and word spacing (see **2**). These are the optimisations for continuous reading in small sizes. There are four Cupidus Text styles available: Text, Text Italic, Text Bold and Text Bold Italic (see **3**).

1. adjusted x-height

The image shows five lowercase 'e' characters in different weights: Light, Regular, Text, Semibold, and Bold. The characters are arranged horizontally and increase in weight from left to right. The 'e' characters are black and have a consistent shape, but their overall height and the thickness of their strokes increase as the weight increases.
